Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

1. Applicant is advised of possible benefits under 35 U.S.C. 119(a)-(d), wherein an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application filed in a foreign country.
2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Hara et al. (US 2003/0227768 A1).
4. Re claims 1-5: Hara discloses a light source structure having a light unit including a lighting member which is a CCFL (11 in Fig. 3B) and a plurality of lighting components which is a plurality of LEDs (31 in Fig. 3B) respectively disposed on two elongated sides opposite each other (See Fig. 1). Further, Hara discloses a flat, rectangular, and transparent plate (50).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2875

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hara as applied to claim 1 above, and further in view of Hoelen et al. (US 2003/0043567 A1). The teachings of Hara have been discussed above.

Re claim 6: Hara does not disclose that the lighting member is disposed on a side of the guidelight plate, and the lighting components are disposed respectively on two lateral sides of the guide light plate. However, Hoelen teaches a light source structure having a plurality of lighting components disposed on three sides of the rectangular guidelight plate (See Fig. 4). It would have been obvious to one having ordinary skill in the art at the time of the invention was made to dispose Hara's lighting member on a side of the guidelight plate, and Hara's lighting components on two lateral sides of the guidelight, motivated by the teachings of Hoelen that " Light panel --
-- by controlling and adjusting the light output of the different color LED's and the color space can be increased as a result of the higher degree of color saturation, that can be obtained with light sources of different types/colors (Paragraph 0003).
